Writing. D

In my opinion invention that should have exist in our regular life it's a device that cleaning air around you, because nowadays atmosphere of earth is so polluted and air is not clean enough to be healthy. For example in Kyrgyzstan air is so polluted that people in this country gains a lung diseases and even dies of polluted air. If humanity take care of global warming and unite to solve it we would have never needed in device like this. Also second invention that I wanted to exist, it's a (synthesator) machine that can produce natural resources. It would be helpful (too) for nature because people now don't need in resources and they stop water, ground, etc. pollutions. And if it's in economy I think government gonna take it under control and if mankind stop global warming we can focus on new inventions start exploring space colonize Mars and be species that we must be. Words: 155

Use of english

- | | |
|--------------------------|-------|
| 1. remembering | 11. B |
| 2. (shelter) falling | 12. B |
| 3. shelter | 13. B |
