## Writing

D) Tell us about an Invention that should exist!

Nowadays, mankind is continuing the way which our past generations had spend so much time on - making life easier. So, now we aren't betraying this idea, furthermore making more steps in future. Actually, a lot of scientist's main goal might be one of the greatest Invention of all time - time machine.

In my point of view, this is the hardest achievement ever, cause first of all we must make a teleporter. The main difference we saw not so far ago. A fantastic film, "Back into the Future" shows exact difference between them - main characters used DMC Delorean as their time machine, and it had not only the right timer which could teleport you on time that you set, however it also had a positioning equipment, cause if you just move in the past or future without knowing coordinates - we will be in space with not so much options to do - only die.

So, if this Invention will be announced soon (our generation won't see it) it has a lot of opportunities for students. Actually, if scientist won't change the space-time continuum, about which Albert Einstein worked a lot, expectations will have a high amounts of not only visitors, also ways to change education, like if our time machine was transparent, history subject could exactly show the all eras Earth had existed on. Literature shows the situation, facts based on those writers that we make aspects on, like if we take BC Greece, Philosophy was one of the only subjects that time and it affected on a such deep perspective of books.

To sum up, I think time machine and teleporter can be used in school education to make it more enjoyable and teachable.
